

Using Technology to Go Beyond the One-Shot

Meredith Farkas
Portland Community College

Hi! I'm Meredith

- Faculty Librarian and SAC Chair at Portland Community College
- Previously: Head of Instruction at Portland State University, Head of Instruction at Norwich University
- Lecturer: San Jose State University's School of Information.

The problem

"It has become [sic] clear that the 'one-off,' demonstration-style information skills classes delivered out of curriculum context do not necessarily coincide with the students' need for information, are sometimes not valued by the students, and do not necessarily prepare them for the challenges of research, problem solving and continuous learning."

Orr, D., Appleton, M., & Wallin, M. (2001). Information literacy and flexible delivery: Creating a conceptual framework and model. *The Journal of Academic Librarianship*, 27(6), 457-463. doi: 10.1016/S0099-1333(01)00263-4

The problem

"We continue to do one-shot generic and subject-specific sessions, as well as offering point-of-need guidance at the reference desk, recognizing that such “training” does not even begin to make a student literate within the world of information.”

Badke, William B. “Can’t get no respect: helping faculty to understand the educational power of information literacy.” *The Reference Librarian* 43.89-90 (2005): 63-80.

Time
constraints

The need to
focus on just a
few things in
the session

Students don't
know what they
don't know

Library session
timing is not
always ideal

Some students
need repetition

We often don't
know where
students are in
their learning
before we get
into the
classroom

We can't teach
ALL THE
CLASSES

Popular solutions

- Multiple class visits
- Librarians embedded in classes and/or online discussion forums
- Credit courses

Bowler, Meagan and Kori Street. "Investigating the efficacy of embedment: experiments in information literacy integration." *Reference Services Review* 36.4 (2008): 438-449.

"As the level of librarian embedment increased students' performance on the research component of the rubric increased as well."

"Although the improvement in IL among students in WMST 3305 was astounding in some ways, the resource cost is not sustainable. Unless resourcing approaches are found to permit that kind of sustained, immersed embedment, we would recommend that type with caution."

Van Epps, Amy and Megan Sapp Nelson. "One-shot or Embedded? Assessing Different Delivery Timing for Information Resources Relevant to Assignments." *Evidence-Based Library and Information Practice* 8.1 (2013): 438-449.

"The study found a statistically significant difference between groups of students, demonstrating that the frequent, short library instruction sessions produce an increased use of high-quality content. Similarly, the sections with multiple library interactions show more use of periodicals than websites."

Wang, Rui (2006). "The Lasting Impact of a Library Credit Course". *Portal*, 6 (1), p. 79.

"The lasting impact of the library credit course LIB 197 was demonstrated by the difference between the performance of two groups of students at CMU in the fall of 2004. The study results show that the group of students who previously took the library course were not only able to cite more scholarly resources and produce fewer incomplete citations, but they were also able to obtain higher grades for their papers and courses than the group of students who did not take the course."

Phelps, Sue F., Heidi E.K. Senior and Karen R. Diller. “Learning from each other: a report on information literacy programs at Orbis Cascade Alliance libraries.” *Collaborative Librarianship* 3.3 (2011): 140-153.

"Lack of adequate staffing is reported to be a contributing factor to unmet instruction goals according to the Alliance survey. Respondents complained about “demand outgrowing capacity.”... Two respondents hoped to ease the teaching burden with “online interactive modules” or “scaling back our in class instruction...finding ways to remain integrated into the curriculum and courses, to offer IL instruction through other means than in person. "

Sustainable, collaborative, high-impact projects

- Flipped instruction
- Tutorials
- Toolkits to support faculty information literacy teaching
- Just-in-time learning objects

Flipping instruction to increase impact

Online worksheets that teach AND assess

- Can be created in Google Forms or Qualtrics (even Survey Monkey would work)
- Text and video that teach skills; activities that allow students to practice those skills
- Students do authentic research on their own research topic

RD 115 Messersmith-Glavin Research Worksheet

This online worksheet is designed to help you get practice searching for and selecting sources. Please have this worksheet completed by the due date specified for your class. If you already have a topic chosen, this should take about 20-30 minutes to complete. If not, the worksheet will guide you in choosing your topic as well.

What is your name?

Meredith Farkas

Which Reading 115 class are you taking?

- ☒ M/W 9:00-10:50am (CRN 11676)
 - ☐ M/W 1-2:50pm (CRN 11677)
 - ☐ T/Th 3-4:50 (CRN 11680)
-

Have you already chosen a topic for your research or at least have one that you're considering?

- ☒ Yes
- ☐ No

Next >>

Choosing a Topic

The first step for your research assignment is to select a topic. What makes a good topic?

1. Researchers have published on this topic;
2. You are interested in it;
3. You can come up with questions about the topic, things you're curious about;
4. The topic involves multiple viewpoints.

Watch the following video on topic selection. Then try exploring some of the tools linked below the video to help you select a topic.

[SIRS Knowledge Source](#)

Full text information on social issues, science, health, history, government, business, and the arts and humanities.

What interests you about this topic or what question(s) do you have about this topic?

Before you start searching on your topic, it's useful to consider the various possible keywords you could use in searching. Here's why:

1. Computers are clueless. They don't know that a word like salary means about the same thing as earnings or pay.
2. The terms that you naturally think of when you think about your topic may not be the same words that people use to write about the topic.

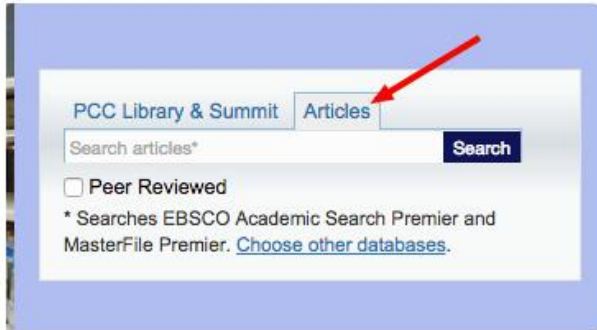

This requires you to think not only of the terms that naturally come to your mind, but any terms that mean the same thing or are related.

What keywords might you use in searching for your topic? If you need help selecting keywords, try watching this two-minute video from Portland State University (embedded below).

List keywords related to your topic. Be sure to think of terms that are related or mean the same thing.

The four-minute video, embedded below, offers tips on how to find and access articles from the library search box.

What keyword(s) did you use? If you connected keywords using AND, OR, or NOT or used quotation marks or other symbols, please show that below.

Authors: Rabel, Robert J. ¹	 E-mail

Subject Terms: *IDENTITY (Philosophical concept) *COMPARISON (Psychology) *ORIGINALITY *ART & motion pictures *MOTION pictures -- History	 Export
	 Create Note

Your article citation:

What problems did you encounter when you were searching (if any) or what questions do you have?

What was something interesting or helpful that you learned from this activity?

Finding Sources

Now you're ready to start searching for sources for your project! Try searching for books using the library search (found on the front page of the library website www.pcc.edu/library). Be sure the PCC Library and Summit tab is selected before you submit your search.

If you didn't have luck with the first keyword(s) you put in, try some others from the list you generated. There's no one perfect word that will find everything we have on a topic.

What keyword(s) did you enter for searching?

Include the citation of a book you found that is related to your topic in MLA format. You can get a citation you can paste in from the library search (see the image below). When you find a good book, click on the Availability & Request Options or Item Details tab and then click on the Actions button on the right-hand side. You'll see an option to generate a citation on that drop-down list. Please note: while these generated citations are often correct, you will want to double-check to make sure they are (don't worry about it for this activity though).

The secret sauce

- Pre-assignment is required (for a grade)
- Instruction session is developed based on the results of the worksheet

The results

- My understanding is increased
- My instruction is more tailored
- I can cover more ground
- Students are more engaged
- Students directly benefit from the assessment

The Challenges

- Having enough lead time
- Getting faculty on-board
- Having time to analyze the results

Evaluating Sources to Find Quality Research

This Microsoft Word handout includes three questions you can ask to determine whether a source is a good fit for your needs.

[Go to Evaluating Sources to Find Quality Research »](#)

Evaluating Sources to Find Quality Research

Below are three questions you can ask to determine whether a source is a good fit for your needs. You need to read the text in the handout and think about the quality of the source, and the requirements of your assignment.

Question #1: How reliable is the source and are they trustworthy?

When you're looking at a source, think about these questions: What makes them trustworthy or not? What does the assignment give you to consider?

Consider the main message:

- Credibility
- Authority
- Objectivity
- Accuracy

Do you agree or disagree with the source's main message?

The author's name is credible. The author is credible. The author is credible.

The author's name is credible. The author is credible. The author is credible.

The author's name is credible. The author is credible. The author is credible.

The author's name is credible. The author is credible. The author is credible.

The author's name is credible. The author is credible. The author is credible.

The author's name is credible. The author is credible. The author is credible.

The author's name is credible. The author is credible. The author is credible.

[Download "Evaluating Sources to Find Quality Research" \(Word\)](#)

Evaluating Sources to Find Quality Research

Here are three questions you can ask to determine whether a source is a good fit for your needs. Your needs depend on the types of evidence you are looking for, the points you want to make, and the requirements of your assignment.

Question #1: Who wrote this and are they trustworthy?

When you're looking at a source, find out who wrote it. What makes them trustworthy or not? What about their background gives them expertise?

Expertise can mean many things:

- Education
- Professional experience
- Life experience
- Significant research and interviewing (like a journalist does)

You might find the author's qualifications listed within the source. On many websites, the author's name is a clickable link. If not, you might want to do a web search for the author's name. Ask yourself why you might or might not trust them.

Question #2: What biases (of the source or publication) exist?

A bias is a prejudice in favor of or against something. It's impossible to write something totally free of bias – everything has a perspective – but some sources try to acknowledge multiple sides of an issue and others do not.

Point-of-Need Online Learning Objects

Library DIY: My Assumptions

- Many students do not like to ask for help from a reference librarian
- Students are not usually looking to learn how to do research, but to do something specific
- Students want quick answers to their questions, not a tutorial

Do students come looking for this?

I need to know
about the
information
cycle

I would like to
know how to
evaluate scholarly
materials

I would like to learn
proper search
query language

I want to learn all
about plagiarism

I want to learn the
art of topic
development

Or do students come looking for this?

I need 3 articles
on global warming

I'm looking for the
book "The
Awakening."

I searched for my
topic in JSTOR and
couldn't find
anything

I'm looking for
topographical maps
of Chile

How do I cite this
in APA format?

I'm not sure this
article I found is
scholarly

The Information Process

Have you ever wondered how a simple question or a single event in history becomes the focus of research and scholarly analysis?

In this tutorial, you will learn about:

- The timeline for producing scholarly information
- The resources available throughout the information cycle
- The types of information used and produced in different disciplines

Information Types

Library DIY

- Small pieces of instructional content
 - Based on questions we get at the reference desk
 - Each one answers just one question
 - If in-depth help needed, link out
- Information architecture that gets students to just the information they're looking for
- A reference librarian in a box

describe my
need**

What best describes your need for articles?

I am looking for **peer-reviewed** articles

I am looking for **newspaper** articles

I am not sure **where to** search

I need to select **terms or keywords** to search with

I need **search** tips

Nothing I found **was in full** text

I searched and **found too little** or too much

I am looking for a **specific** journal

I am only **supposed to** use print or non-Internet sources

I want to **find** or browse journals by subject

I need to find **magazines** in the library

I am not sure **what types of** sources I need

These **do not** describe my need

Finding peer-reviewed articles

Related DIYs

How can I tell if something is peer reviewed?

What is peer-review?

1. Limit your search to only peer reviewed articles

Look for a checkbox, either on the search screen or the results page, that will limit your search to scholarly (peer reviewed) articles only.

Search in a database that only contains scholarly (peer reviewed) articles.

Scholarly (Peer Reviewed) Journals

2. Find out more about the journal

If you are in a database, check to see whether you can click on the journal title to view more information about the journal.

Google the title of the journal and look for an editorial policy page or a page for authors. This will tell you whether the journal uses a peer-review process before publishing articles.

Search for the journal title in Ulrichs (a database that the library subscribes to). If you see this icon  that means that the journal is refereed (another term for peer review).

You can find out more by watching the two-minute video below.

The screenshot shows the 'Is it peer reviewed?' page for the journal 'Safety Science' on the Elsevier website. The page is titled 'Is it peer reviewed?' and features a large play button icon in the center. The journal title 'Safety Science' is prominently displayed, along with its description: 'See also Elsevier's Safety and Transportation portals. Safety Science serves as an international medium for research in the science and technology of human safety. It extends from safety of people at work to other spheres, such as transport, leisure and home...'. The page also includes a sidebar with links like 'Guide for Authors', 'Submit Your Paper', 'Track Your Paper', 'Order Journal', and 'View Articles'. At the bottom, there are sections for 'Impact Factor: 1.402', '3-Year Impact Factor: 1.578', 'Imprint: ELSEVIER', 'ISSN: 0925-7535', 'Contact the Publisher', 'Policies and Guidelines', and 'Publishing Ethics Resource Kit (PERK)'. A large advertisement on the right side reads 'Make your research count, publish ethically' with the URL 'ethics.elsevier.com'.

Results

- Lots of enthusiasm from students and faculty
- Good usage data
- Reference librarians find it easy to link or point to in a reference transaction
- Usability testing showed good usability
- Replicated at more than a dozen institutions

Lessons

- Focus on faculty for increased impact
- Design learning objects with reuse and recombination in mind
- Look at what's already out there
- Develop content based on student info-seeking behavior (not how librarians conceive of the research process)
- Make it easy for faculty to use your content in classes

Lessons

- Don't do this alone
- Great to start this type of work with interdisciplinary or foundational programs
- Relationship-building with faculty and staff is key
- This requires a major commitment on the front-end to save time in the long-term
- You can lead a horse to water...
